JOINT HEALTH SUPPORT MADE EASY

## A Joint Supplement Developed Specifically For Dogs

As pets live longer, they display many signs of aging – including joint discomfort. If you're like most veterinarians, you treat more animals with joint issues than ever before.

There are numerous joint products available and many clients are interested in alternative methods of supporting normal joint function. They rely on you, their pets' veterinarian, to provide recommendations.

### THAT'S WHY WE DEVELOPED THE FAMILY OF HIGH-QUALITY PHYCOX® JOINT SUPPLEMENTS.

Veterinarians and pet owners trust the Phycos® Joint Supplement brand as an oral supplement that offers pet owners a clear option for the health of their dogs. Phycos® Joint Supplements are comprehensive formulas that help maintain healthy cartilage and joint mobility in dogs, young and old. As joint discomfort decreases, many dogs become more playful – your clients will see the improvement in their pets' behavior.

Phycos® Joint Supplements are the convenient choice for veterinarians, pets and pet owners.

## The Only Canine Joint Supplements With Phycocyanin

Phycos® Joint Supplements are the only canine joint health support products containing phycocyanin. Phycocyanin is a natural antioxidant that has powerful free radical scavenging properties. Free radicals cause cellular damage, and inflammation; phycocyanin supports the body's normal defense against the harmful effects of these free radicals. Clinically, this may help ease discomfort associated with normal daily exercise and activity. (The use of phycocyanin in canine joint supplements is covered by US Patent 7,025,965)

### A Complete Joint Supplement

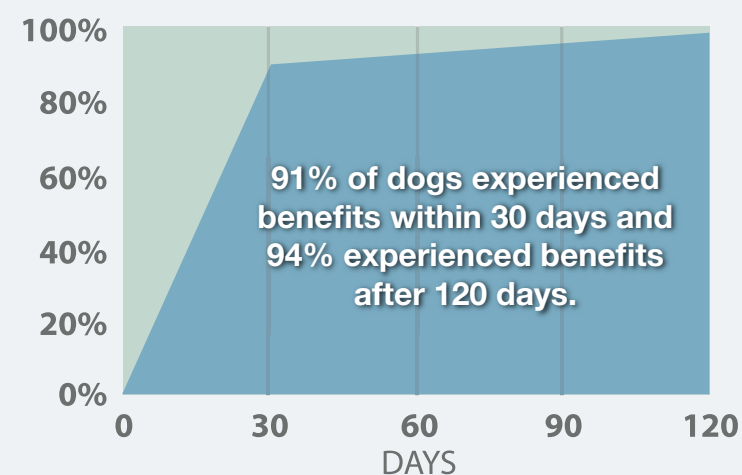

Phycos® Joint Supplements provide multiple formulations with a comprehensive blend of beneficial ingredients for joint health – phycocyanin, glucosamine, MSM, antioxidants, creatine and more. This unique blend of phycocyanin and beneficial ingredients helps support bone, muscle, and joint health.

## A Joint Supplement With Noticeable Benefits

An observational safety study\* with 12 dogs documented no adverse events even with oral administration of 16 times the labeled dosage of phycocyanin. The dogs remained healthy and maintained body weight throughout the course of the study without any dose-related adverse events reported.

Thousands of veterinarians and pet owners have come to know and trust Phycos® Joint Supplements to improve pets' quality of life by supporting their joint health. This trust comes from delivering great results.

A clinical study\* evaluated 69 dogs with joint discomfort that received Phycos® Original Formula Soft Chews Joint Supplement. The study showed statistically significant owner-perceived improvements in mobility, playfulness, alertness, activity level, ability to rise, discomfort level and enthusiasm to run outside. The result was happy dogs and happy owners.

## 100% Palatability Guaranteed

Dogs love the taste of Phycos® Joint Supplements. In fact, we guarantee the palatability of our products when the product is purchased from a veterinary hospital. If your clients are not 100% satisfied with the palatability of any Phycos® Joint Supplement, we will unconditionally replace any product returned to your hospital.

### A Phycos® Joint Supplement for Every Canine Patient

#### Phycos® Soft Chews Joint Supplement –

The original formula is recommended for active dogs and dogs of all ages who require a moderate level of joint support.

#### Phycos® MAX Soft Chews Joint Supplement –

Recommended for sporting and working dogs, and dogs of all ages who require a maximum level of joint support. Phycos® MAX Soft Chews Joint Supplement contains 3X the phycocyanin as compared to Phycos® Soft Chews Joint Supplement, and six additional ingredients to aid in senior health and advanced joint support.

#### Phycos® HA HypoAllergenic Soft Chews Joint Supplement –

Developed for dogs with food sensitivities or intolerances. Phycos® HA HypoAllergenic Soft Chews Joint Supplement uses hydrolyzed vegetable protein from soybeans and does not contain beef, chicken, or wheat. Hydrolyzed proteins are small molecules which are less likely to stimulate an allergic response. If your patients have food sensitivities or intolerances, recommend Phycos® HA HypoAllergenic Soft Chews Joint Supplement.

#### Phycos® HA HypoAllergenic MAX Soft Chews Joint Supplement –

Phycos® HA HypoAllergenic MAX Soft Chews Joint Supplement contains the same hydrolyzed vegetable protein as Phycos® HA HypoAllergenic Soft Chews Joint Supplement, in addition to six more ingredients and 3X the phycocyanin for maximum support of joint health.

#### Phycos® Small Bites and Granules Joint Supplement –

Developed for dogs under 30 pounds or for dogs who may not eat the larger Phycos® Soft Chews Joint Supplement.
