

# Redonyl® Ultra

(Ultra-micronized Palmitoylethanolamide)

When your pet's skin health is compromised, the exact cause can often be difficult to determine. Supporting the skin, regardless of the cause, is essential to keeping your canine friend happy and comfortable.

Allergies are one of the most common causes of compromised skin health in dogs. These allergic reactions can be brought on by normally

harmless substances like pollen from grass or trees, mold, house dust mites, and other environmental allergens. Allergic dogs may be itchy and their skin may be inflamed. Fortunately, Redonyl Ultra, a new oral nutraceutical for dogs, is available to support their skin health.

## What is PEA?

PEA (palmitoylethanolamide) is the active ingredient in Redonyl Ultra. It is a naturally-occurring lipid compound found in both animals and plants. Redonyl Ultra provides a concentrated source of PEA for dogs in a palatable, easy-to-administer soft chew.

## How does PEA help support skin health in the dog?

PEA is produced in the body in response to tissue injury. When a dog's skin becomes unhealthy, the body produces 30 times more PEA than usual to help maintain skin well-being. PEA helps to stabilize mast cells; mast cells are a type of white blood cell important in inflammation and allergic reactions. When mast cells are activated by allergens, they release histamine and other substances which inflame the skin. In the presence of PEA, mast cells release less histamine and other inflammatory substances, and skin health is maintained.

## How do I use Redonyl Ultra?

Your veterinarian can recommend an appropriate length of Redonyl Ultra administration for your dog based on its individual needs. And you can watch for a response in your pet's attitude, comfort, and activity level.

Your veterinarian may also recommend you use Redonyl® Ultra (Ultra-micronized Palmitoylethanolamide) with topical therapies for skin health, including shampoos, mousses, conditioners, sprays, and wipes. For skin issues with wide ranging causes, a multimodal approach, including Redonyl Ultra, is often recommended for maximum skin support.

## Dosing

### Optimized Dosing Chart

Dog (Pounds)	100 mg	200 mg	Frequency
Less than 7	½ chew		Every other day
7 – 14	½ chew		Once daily
15 – 24	1 chew		Once daily
25 – 35	1½ chews		Once daily
36 – 49		1 chew	Once daily
50 – 73		1½ chews	Once daily
74– 100		2 chews	Once daily

## Follow-up care
